Part I — Questions

1. Write a statement that creates a 10-elements int array named numbers.

2. In the following, what is the value of the size declarator? What is the value of the index?
   ```java
   int[] numbers;
   numbers = new int[8];
   numbers[4] = 9;
   ```

3. What is wrong with the following array declaration?
   ```java
   int[] books = new int[-1];
   ```

4. Draw the content of the scores array once those statements have been executed.
   ```java
   int[] scores = new int[3];
   scores[0] = 13;
   scores[2] = 25;
   ```

5. What will be displayed at the screen by the following program?
   ```java
   for (int num = 3 ; num <= 5 ; num++)
       Console.Write(num + " ");
   ```

6. Write a for loop that display at the screen the sequence “1, 2, 3, 4, 5, 6, 7, 8, 9, 10, “.

7. Adapt the code from Exercise 6 so that the same sequence will be displayed at the screen, but without the last comma.

8. Write a for loop that display at the screen the sequence “1 3 5 7 9 “.

9. Given an int variable myVar initialized with a positive value, write a for loop that sums the integers between 0 and myVar (i.e., \(0 + 1 + \cdots + (myVar - 1) + myVar\)).

10. Consider the following code:
    ```java
        for (int y = 1; y <= 3; y++)
        {
            for (int z = 1; z < 5; z++)
                Console.Write("Scene " + y + ", take " + z + ". ");
            Console.WriteLine();
        }
    ```

    How many times does the outer loop iterates (i.e., how many scenes are shot)? How many times does the inner loop iterates (i.e., how many takes for each scene)? Finally, what is the total number of iteration of the nested loops (i.e., how many takes are made, total)?
11. Circle the pretest loops:

```
do while  switch  while  for  if-else-if
```

12. What will be displayed at the screen by the following code?

```java
int[] values = new int[6];
for (int i = 0; i < 6; i++)
values[i] = (i*2);

foreach (int j in values)
Console.WriteLine(j);
```

13. Suppose we are given an `int` array `dailyPushUp` with 7 elements. Write a piece of code that display the value of the elements stored in the array `dailyPushUp`.

14. What is “array bounds checking”? When does it happen?

15. Is there an error with the following code? If you think there is one, explain it, otherwise draw the content of the `myIncomes` array once those statements have been executed.

```java
double[] myIncomes = new double[5];
myIncomes[1] = 3.5;
// No income on day two.
myIncomes[3] = 5.8;
myIncomes[4] = 0.5;
myIncomes[5] = 1.5;
```

16. What would be the size of the `test` array after the following statement has been executed?

```
int[] test = {3, 5, 7, 0, 9};
```

17. Write a statement that creates and initializes a `double` array with the values 12.5, 89.0 and 3.24.

18. What is the value of `count` and the content of `number` once the following has been executed?

```java
int count=2;
int[] number={3, 5, 7};
number[count--] = 8;
number[count]--;
```

19. Suppose we have an array named `temp` that has been declared and initialized. How can we know the number of elements in this array?

20. Describe what the following code would do.

```java
int[] record = {3, 8, 11};
int accumulator = 0;
foreach (int i in record)
accumulator += i;
```
21. Assuming we have two `int` arrays of the same size, `firstA` and `secondA`, write a program that copy the content of `firstA` into `secondA`.

22. Assuming we are given an `int` array named `arrayF`, write a program that display the product of its elements. That is, if `arrayF` contains 2, 3 and −1, then your program should display −6.

23. Write a static method (header included) that takes as argument an `int` array, and display at the screen the value of each element of that array.

24. Write a static method (header included) that takes as argument an `int` array, and stores the value 10 in each element of that array.
