- College algebra based physics (PHYS1111&1112)
- Calculus based physics (PHYS2211&2212)
- Thermal physics (PHYS4310)

- Five special topics courses (PHYS 4950, all developed at Augusta University)*
 - i. Solid State Physics
 - ii. Magnetism and Magnetic Materials
 - iii. Phase Transition and Critical Phenomena
 - iv. Many particle physics (including Green function)

v. FORTRAN programming

**these courses are the motivation behind pursuing my solid state physics textbook project (which has now been published)*

Guest lecturer: Sun Yat-Sen University, Electrodynamics for Physics and Pre-engineering majors, June 2011

Online course

Physical science – physics for non-science majors (PHSC1011) – summer 2017 - 2019

The course was fully online with embedded lectures, interactive materials (video, figures), quizzes, review questions, and exams included in D2L. I also teamed up with Hands-on-Lab (HOL) from Denver, CO to offer the students an at home lab experience. Students purchased a lab kit with 10 lab sessions that included the traditional physical science lab activities. Thus the students received a course whose contents were at the same level as that of a regular face-to-face class.
